PREVENTATIVE MAINTENANCE

CZM Foundation Equipment's drill rigs are the primary asset of many foundation contractors. Proper maintenance is vital to reducing wear of key components, maintaining optimal performance, and maximizing the contractor's return on investment.

To keep our machines working at peak performance, and to reduce downtime on the jobsite, CZM Foundation Equipment offers service plans based on hours of use or length of time, whichever occurs first.

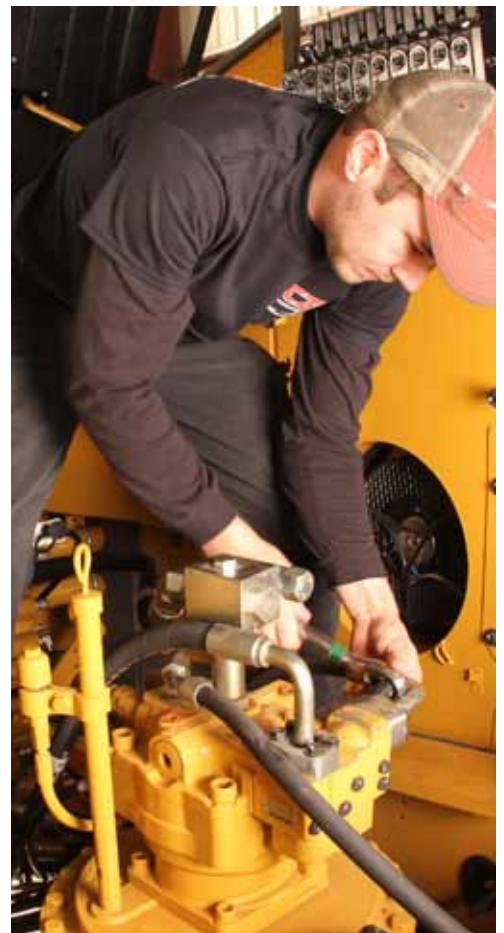

- Plans for hourly increments in intervals from 500 to 2,000 hours
- Quarterly, semi-annual, annual plans

Drill rigs that work in severe operating conditions may require more frequent maintenance.

For customers who prefer not to manage scheduling maintenance, we offer service packages that allow for CZM technicians to come to your machine and perform inspection and preventative maintenance at regular intervals.

Our ability to monitor machines through GPS and sim cards allows us to determine where your machine is, its hours of use, and whether any defects or faults are occurring, so that we can schedule maintenance and suggest necessary repairs.

CZM also offers training programs to companies who opt to perform regular maintenance themselves.

KELLY BAR REFURBISHING

Kelly Bars are key components in CZM foundation drilling rigs, but they're also wear items in need of regular maintenance to ensure optimal performance, minimize machine downtime, and diminish the occurrence of damage that could necessitate complete replacement of the Kelly Bar.

We offer yearly inspection and maintenance service plans, which include 60 hours per year of maintenance, inspecting all elements, repairing welds as needed, polishing, and remounting.

This service can be performed at the customer yard or job site. For companies who prefer to perform maintenance themselves, we offer training programs for 1,000- and 2,000-hour maintenance.

Additionally, we can repair broken Kelly Bars. For this service we fly a technician to your jobsite or customer yard, or can perform service at our facilities in Savannah GA, Dallas TX, Ventura CA, or Calgary AB, Canada.

KELLY BAR RENTAL

Kelly Bars are available to rent for as long as necessary to perform repairs to damaged Kelly Bars, eliminating downtime on the job site. Kelly Bars can be rented for a little as one week, and inventory may be available at each of our four locations.

PARTS & ACCESSORIES

CZM Foundation Equipment stocks a full inventory of parts dedicated to manufacturing, production, and sales, at our manufacturing headquarters in Savannah GA. Wear items and select parts are also available at all four CZM locations in North America.

Because we understand it's important to keep equipment running to reduce downtime on the jobsite, \$1 million of our over \$6 million inventory is dedicated to after-sales.

MADE WITH PRIDE IN THE USA

ON-SITE REPAIR SERVICES

At CZM Foundation Equipment, our customers and the success of their projects is our priority. To help ensure minimal downtime in the field, skilled CZM technicians are on-site at all five locations, and we offer a 24-hour service line. For more complex issues, we'll fly one of our engineers from our manufacturing headquarters in Savannah GA, to your facility or jobsite as needed.

KANBAN BOX OF SPARE PARTS

CZM Foundation Equipment offers the ease and convenience of spare key drill rig wear items that can be kept readily available on the job-site.

- Simple system for parts inventory management
- Easy to use, and to re-order parts as necessary
- Visual management of parts inventory
- Online photos allow for quick communication
- Allows inventory of wear items to be spread across multiple customer yards and jobsites
